

Nifty100 Analytics — Sprint 6 Acceptance Checklist

Acceptance verification for AC-01 through AC-20

Gate	Status	Verified result
AC-01	PASS	92 companies
AC-02	PASS	Required historical coverage threshold satisfied
AC-03	PASS	Foreign-key integrity check passed
AC-04	EXCEPTION	1,073 financial ratio rows; requirement specifies at least 1,100. No source data available to legitimately create the missing 27 rows.
AC-05	PASS	TCS revenue CAGR calculation matches stored value exactly
AC-06	EXCEPTION	TCS source ROE discrepancy: source companies.xlsx reports 0.52%; financial statements and ratio engine calculate 48.284%.
AC-07	PASS	quality_compounder preset contains 24 rows
AC-08	PASS	Company/profile data load measured at 0.1464 seconds
AC-09	PASS	Screener CSV contains 24 rows and 22 columns
AC-10	PASS	92 tearsheets generated; sample PDFs validated for 2 pages and readable text
AC-11	PASS	FastAPI health endpoint returned HTTP 200
AC-12	PASS	TCS ratios endpoint returned 12 years of data
AC-13	PASS	API quality_compounder preset returned 24 results
AC-14	PASS	All 11 peer groups present
AC-15	PASS	cluster_labels.csv contains 92 unique companies
AC-16	PASS	All 92 companies have at least one pro and one con
AC-17	PASS	92 tearsheets; none below 30 KB
AC-18	PASS	102 pytest tests passed; 0 failures
AC-19	PASS	validation_failures.csv contains all 4 required columns
AC-20	PASS	analyst_guide.pdf contains 12 pages

Documented project exception — D-01: The populated project database is maintained at the project root as nifty100.db, consistent with application source configuration. data\nifty100.db is a 0-byte unused artifact and was not copied over to avoid creating database-path ambiguity.

Final sign-off: Acceptance gates verified against the project state available during Sprint 6 QA. Exceptions are documented above and should not be represented as PASS.
